

Editing Architect Pages

Requires

THEME PRESS

Editing Architect Pages

Prompt

Updating the underlying control pages of a site (or space)

Outcome

[Architect Pages](#) help both shape and insert content on your pages. Whether you are editing an underlying Banner, Menu, Header, Footer, or Layout page, the process is much the same.

Steps

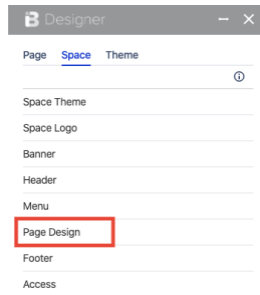

On any page, open the Theme Designer and click the Space Tab

Open the Theme Press Designer panel with the "." (period, full stop) key. Then click "Space" to open the Space tab.

Theme Press Designer Space Tab

Open the expander for the type of architect page you want to edit

(e.g. Banner, Header, Page Design, Menu, Footer)

To view that page, click on the eye icon next to the name

You will be taken to the "architect page" which is located in the [Theme Press Default Space](#).

Edit the page as you see fit

The architect pages are just Confluence pages that are rendered as components in a Theme Press-enabled space.
