

Space Owner

Relates To

CONTENT FLOW

Space Owner

Prompt

A designated individual responsible for the space.

Definition

The space owner is a special association between a Confluence user and a Confluence space. Because out-of-the-box Confluence only shows you the *creator* of the space (who is likely an IT system administrator), the space owner, by contrast, can display its author, or manager, or primary contact. In other words, a more meaningful role suited to the needs of the business or organization.

Additionally, by [displaying the space owner with the Page Metadata Macro](#), one can achieve an actionable way for organizations to establish ownership of content, as well as enabling processes for managing and updating content across a space.
